- Pro 110 ULV (2 hours)
- Dagnet FT EC (2 hours)
- Niban Granular Bait (No time away)

Preparations before treatment

- Items need to be moved away from problem area (if any)

General information

Carpenter ants are attracted to wood structures, trees and fences that are not structurally sound anymore. Structures and trees that are dying and rotting can attract carpenter ants. Always keep a lookout for them. If you see an ant that is abnormally big, as big or bigger than your thumb, call a professional. Carpenter ants like to tunnel and carve through wood and can cause a lot of damage to your house or can make your tree fall.
