

Sowbugs

This is for the treatment of sowbugs.

Possible chemical(s) to be used and time to stay out of the building

- Pro 110 ULV (4 hours)
- Dragnet FT EC (4 hours inside, 2 hours outside)

Preparations before treatment

- All furniture needs to be moved away from the walls 2-3 inches only during interior treatments

General information

Sowbugs are moisture attracted bugs. They like to live and breed where there is moisture or high humidity. They tend to be seen in gardens under rocks, in basements, or areas where water pools more than usual. It's important to reduce the amount of water pooling around the house to reduce the chances of sowbugs infesting the house
