

Wasps

This is for the treatment of Wasps.

Possible chemical(s) to be used and time to stay away from treated area

- Pro 110 ULV (2 hours)
- Doctor Doom (no time)
- Dragnet FT EC (2 hours)

Preparations before treatment

- No preparations needed

General information

Wasps actually start their nests brand new every year. The drones die off after every season and the queens will hibernate and start a new nest year after year. The best trick to not be stung by a wasp is to not swap when they are around you.
